

Maintenance & Asset Management

Today's facilities teams need an integrated solution that connects people, assets, and data — providing real-time visibility, accountability, and control across every location and device.

VLogic offers a comprehensive, cloud-based platform that simplifies operations, strengthens maintenance performance, and optimizes asset lifecycles.

Whether you manage a single building or a complex multi-site portfolio, this powerful system keeps your facilities running smoothly and efficiently.

“

“After a thorough search for a new maintenance and asset management platform, VLogic stood out with the product that served the needs of the Albany Med Health System - providing centralized call center, asset management, preventative maintenance, and work order management. Overall, very satisfied.”

Briggs Montero, VP of Facilities
Albany Med Health System

Core Capabilities

Work Order Management

- Submit, assign, and track maintenance requests in **one centralized platform**.
- Prioritize work based on asset criticality and operational impact.
- View real-time status updates and completion timelines from any device.
- Access maintenance history, labor hours, and costs instantly.

Preventive & Predictive Maintenance

- Build custom preventive maintenance schedules to extend equipment life.
- Use data-driven insights and predictive analytics to reduce downtime.
- Automatically generate tasks based on time, usage, or condition thresholds.
- Track compliance with safety and operational standards.

Asset Management

- Maintain a complete inventory of all equipment, systems, and components.
- Store asset details — serial numbers, warranties, manuals, and service history.
- Link assets directly to floor plans for easy visual identification.
- Track lifecycle performance, cost of ownership, and capital planning needs.
