

St. Joseph's/Candler

Creating a Single Source of Truth for Facility and Life Safety Management

CHALLENGES

St. Joseph's/Candler, the largest healthcare provider in southeast Georgia, faced a critical issue managing its facility spaces. Their architectural drawings were outdated in some cases, making it difficult to confidently make decisions about space utilization and future planning.

Due to the lack of real time facilities data, audits and other evaluations were time-consuming and inefficient due to the manual compilation of information required from multiple sources.

"Before VLogic, we were spending countless hours searching for accurate facility information. Now, with a single source of truth, we can quickly access what we need - from fire safety components to floor plans - saving time and improving confidence in every decision we make."

RESULTS

2 Million
Square Feet
Managed

16 Updated
Life Safety
Drawings

-  **Established a Single Source of Truth** for building layout and facility data
-  **Improved Compliance** with strict and changing Joint Commission requirements
-  **Time Savings and Efficiency Gains** from instant access to facility data remotely from any device
-  **Significantly Fewer Hours** spent searching for information and cross-referencing outdated files

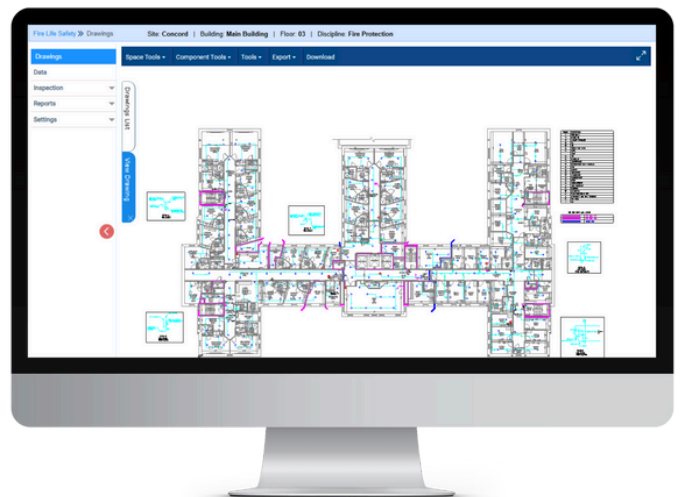

SOLUTIONS

VLogic helped St. Joseph's/Candler resolve these challenges, with Architectural Field Verification and the VLogic software system.

An experienced civil engineering team performed a comprehensive **Architectural Field Verification** of the entire St. Joseph's/Candler facility. Every element was field-verified, adjusted, and updated in detailed CAD drawings. These newly verified and corrected architectural plans were then uploaded into a centralized system, providing a real-time, accurate view of the facility.

Fire and life safety drawings were also updated and integrated into the system as detailed layers, connected directly to the architectural components. This created seamless visualization of key safety systems throughout the facility.

LOOKING AHEAD

To expand on its success with VLogic, St. Joseph's/Candler plans to adopt additional modules of the software system that will further streamline facility management, compliance, and long-term strategic planning.
